

PROJECT SUMMARY

This project encompasses comprehensive selective demolition and abatement activities throughout multiple buildings and associated site areas. Interior scope includes the removal of architectural finishes, fixtures, ceilings, concrete slabs, and roofing systems, as well as the demolition and removal of portable classroom structures. Abatement efforts target hazardous materials such as asbestos-containing materials (ACM) and lead-based components, which are being safely removed in accordance with all regulatory requirements.

In addition to building work, the project includes extensive site demolition, involving the removal of existing paving, fencing, and various exterior structures to prepare for new construction and infrastructure upgrades. The project requires close coordination with other trades and strict adherence to environmental and safety protocols to ensure work is completed efficiently, safely, and with minimal disruption to ongoing site operations.
