

PROJECT SUMMARY

Kiewit Corporation selected Bayview to perform multiple environmental and industrial services on the Oroville Dam, River Valve Outlet System Rehabilitation Project (RVOS) for the Department of Water Resources in Oroville, CA. Bayview Environmental was tasked with performing lead, asbestos, and PCB abatement on various surfaces throughout the facility. Bayview Industrial’s focus was on the draining, purging, and rinsing of hydraulic fluid from tanks, lines and valves that control the flow of water through the dam itself. All work was performed inside the dam while still fully operational which presented unique logistical and operational challenges to the team.
