

### PROJECT SUMMARY

This project was the Rehabilitation of the Historical Plaza Theater in Palm Springs. BDS is performing the Soft Demolition of select interior finishes including all of the theater seating and the Hard Demolition of the entire concrete slab in the Auditorium. BES is performing the abatement of the asbestos containing plaster on the side walls and ceiling of the auditorium. We have installed multiple levels of protection of the historical elements with poly for dust control and fire rated plywood to prevent any damage. This project is going to grow by an estimated 50% in additional work due to a P5 contaminated workspace in the attic from improper previous renovations that impacted the asbestos containing plaster ceiling and air cell ducting insulation.
