

#### PROJECT SUMMARY

This project involves establishing a regulated containment area to isolate and control contamination, including the use of polyethylene sheeting and HEPA-filtered negative air machines. Approximately 51,200 square feet of contaminated ceiling tiles and rodent debris will be carefully removed, bagged, and disposed of. All affected surfaces will undergo a multi-step cleaning process, including disinfectant application, HEPA vacuuming, and thorough wet-wiping. All waste, including cleaning materials and PPE, will be securely sealed and properly disposed of in accordance with health and safety protocols.
