

PROJECT SUMMARY

Bayview Services, Inc. Subdivision Bayview Industrials Services, Inc. (**BIS**) was selected to perform maintenance and repair tasks aboard the **USCGC Woesche** during dry-dock service for the ship's critical systems including fueling systems, sanitary systems and hull inspections. The project required working closely with the Project Management at MIDD and interfacing with USCG personnel and Port Engineers. In addition to the primary tank systems, BIS is also executed eight change orders for short notice items that were critical in the execution of the service period. The services rendered by BIS compliment the MIDD drydock capabilities which make it an international ship repair and re-fit location critical to the United States Coast Guard, United States Navy, State operated ships and private vessels.

The contract for this operation was executed in approximately five months. This and other projects at MIDD have made this a good client for the BIS ship service program which reflects the hard work put in by the BIS Operations and Administrative staffs.
