

PROJECT SUMMARY

Bayview Services, Inc. Subdivision Bayview Industrials Services, Inc. (BIS) was selected to perform maintenance and repair tasks aboard the USNS Frank Cable in a major retrofit of the ship's critical systems including fuel and tank repair. The project requires working closely with the Project Management at MIDD and interfacing with US Navy and Port Engineers. In addition to the primary tank systems, BIS is also involved in the preparation of potable water systems, sanitary systems and additional ship mechanical systems. These and more services complement the drydock capabilities which is an international ship repair and re-fit station critical to the USCG, US Navy and State-operated ships.

The base contract for this operation is anticipated to have a duration of approximately six months. Additional service items or conditions found may extend the operation. This and other operations at MIDD being conducted simultaneously make this a good client for the BIS service line and complement the hard work put in by the Operations and Administrative staff of the division managing these contracts. Additional efforts are underway for locations in the Southern California market and in time to areas outside of CA.
